Street Pedestrian Shelter

HUB has applied its core design principles to the exciting area of shelter systems for the public domain. The result is a beautifully simple and elegant design solution that is cost effective and infinitely adaptable. The engineered system incorporates resolved detailing and employs high quality materials and durable finishes to create an aesthetically pleasing shelter.

The SPS system is a modular solution to public shelter. The basic parts of column, spine, rib, and glazing can be varied to create an endless variety of shelter configurations. The system can adapt to gradients and corners. The canopy width can be as little as 0.8m (single outreach) or as large as 6.4m (double outreach), this allows the shelter to adjust for other objects in the environment, or to create a unique effect.

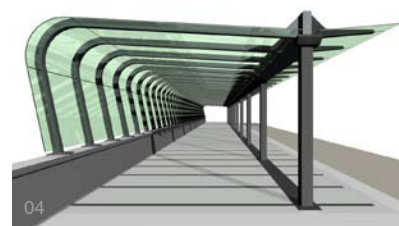

The system can continue to be modified long after the initial installation, allowing it to adapt to changing needs in the public domain. The canopy can be extended, widened and narrowed as needs require.

Glazed shelter bays can be added for additional protection from the elements then extended or removed, and reused elsewhere. Lighting, signage, and digital displays can be integrated into the shelter bays to inform and illuminate pedestrians.

The durable construction and design of the SPS system minimizes and simplifies maintenance requirements.

The columns are compatible with the HUB Universal Mounting System (HUB UMS), facilitating the integration of a wide range of accessories into the shelter. The accessories accommodated by this system include:

- Digital signage
- Real time displays
- Advertising
- Wayfinding signage
- Seating
- Lighting (direct & indirect)
- Timetables

THE CANOPY WIDTH CAN BE AS LITTLE AS 0.8M (SINGLE OUTREACH) OR AS LARGE AS 6.4M (DOUBLE OUTREACH)...
